

### Abstract of the Disclosure

A scooter folding structure includes a frame and a front strut. The frame has a pair of fork boards at the front end, and the front strut comprises a supporting rod protruding from the lower end. The supporting rod has a connecting section pivotally connected to the fork boards of the frame by a pivot. A block with round smooth angles at four ends is secured to the top of a connecting area between the connecting section of the supporting rod and the fork boards of the frame.
